

Wind Energy

Makes a world of difference.

WindIngen: A division of MD&A
25 years in the service business

Quality. Reliability. Ingenuity.

Alternatives to traditional fossil fuels have become economically competitive, more necessary and more in demand. We see the value of being a technically-sound wind turbine services company; delivering high-quality service and reliability. As a company with 25 years of trusted, traditional energy source service & repair, we now provide extensive service, parts and engineering for Wind Turbines, whether for scheduled or unscheduled maintenance.

WindIngen is a division of MD&A. MD&A is the largest non-OEM steam turbine generator service provider in North America with 365 full-time engineers, technicians and staff personnel.

Wind Energy Makes a World of Difference. *So Does Turbine Uptime.*

Renewable energy has never been as important as it is today.

As a responsible energy provider, you need consistent uptime and working repair solutions to keep your competitive edge. You need to deliver wind generated energy like the environment depends on it, because it does.

Turbine downtime is extremely expensive. Parts and repair that lead to extended periods of unreasonable wait time and a loss of your productivity is something you can't afford. You need service, efficiency and reliability. As a wind energy services company, we make wind energy work. We are WindIngen. Power Ahead.

WindIngen's comprehensive maintenance services are incomparable when it comes to value, consistent high-quality service and reliability. Our commitment to you; to provide the best possible maintenance services available to your wind turbines, improve the reliability, availability, and in turn, profitability of your investment.

We don't own wind turbines, but we take ownership in maintaining them. WindIngen can help you operate and maintain your wind farm with greater reliability and profitability. If you are looking for more of a partner than a service provider, you should consider WindIngen.

As a division of MD&A, we have been in the service business for 25 years and understand that being a service provider is founded on technical competence but backed up with communication and goals that are in line with yours.

WindIngen

Makes a World of Difference.

WindIngen provides on-site and on-call wind turbine service using reliable, highly-trained technicians and industry-leading safety practices to ensure the highest possible reliability for your wind farm.
